**DETAILED ACTION**

***Response to Arguments***

1. Applicant's arguments with respect to claims 1-26 have been considered but are moot in view of the new ground(s) of rejection.

***Claim Rejections - 35 USC § 101***

2. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

3. Claims 18-21 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Claims 18-21 lack the proper preamble necessary for a statutory computer program product claim. See MPEP 2100 for guidance on computer related inventions.

***Claim Rejections - 35 USC § 102***

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims 1-26 are rejected under 35 U.S.C. 102(e) as being anticipated by Sano US 7167679, recently discovered, in light of the rejection under 101.

Regarding claims 1-26, Sano discloses an information handling system for providing directions to a wireless unit for improving reception, comprising: logic for determining a target location for improved communication for the wireless unit based in part on information representing a recent position of the wireless unit, a transmitter for transmitting directions to the wireless unit, the directions including information directing a user of the wireless unit to the target position; wherein changing a position of the wireless unit from the recent position to the target position is more likely to result in better reception and transmission of wireless signals to and from a wireless access point (col. 1, lines 26-34 and lines 57-64 and col. 2, lines 12-67 and col. 8, lines 12-56).

### ***Conclusion***
